

Septum Piercing

WITH CLEAN HANDS, clean your piercing 2-3 times a day for approximately 2-3 weeks using a sea salt water solution:

Cleaning Solution:

Dissolve 1/2 a level teaspoon of sea salt (NOT table salt) in 1/2 a pint of boiled water. Do not make it any stronger than this as it will dry out your piercing.

Stir to dissolve and allow it to cool to a comfortable temperature.

Using a cotton bud, drip the solution over and around the piercing.

Over cleaning your piercing is just as bad as not cleaning it at all.

Avoid touching your piercing as this can introduce bacteria and cause infection.

With clean hands, gently wiggle the ring side to side to allow air in to the hole.

It is very important to keep your piercing clean while it is healing.

The end of your nose may feel tender for a few days, you may also experience a runny nose as the jewellery will irritate the hairs

If you are planning on stretching your piercing you must leave it for at least 8 weeks before you start as this will minimise any scarring or tearing.

PLEASE NOTE:

Once you leave the studio your piercing is YOUR responsibility!
Please contact us if you have any queries so that we can advise you.
