

Surface Piercing

You have been pierced with titanium jewellery to minimise the chances of your body reacting to it.

WITH CLEAN HANDS, you must clean your piercing 2-3 times a day for approximately 6 weeks using a sensitive antibacterial hand wash.

Use warm water and ensure your hands are clean then lather a small amount of the product then apply gently to the area cleaning up to and around the jewellery.

Rinse the area very well with clean, warm water and gently pat it dry using a non-fluffy towel such as kitchen paper, that won't leave any fibres behind.

Try not to catch or knock your piercing as this can cause it to grow out, inflame or reject.

Avoid touching your piercing as this can introduce bacteria and cause infections.

Healing times vary person to person but generally heal in 3 to 6 months if there are no initial complications.

Some surface piercings do not heal and will reject, growing out. It is advisable to remove the jewellery to minimise risk of infection and reduce scarring.

PLEASE NOTE:

Once you have left the studio your piercing is YOUR responsibility!

Please contact us if you have any queries so that we may advise you.
